ZHEN, LI B

ART UNIT PAPER NUMBER

2194

DATE MAILED: 07/19/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/749,609

Applicant(s)

MAZZA, SAM

Examiner

Li B. Zhen

Art Unit

2194

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 October 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. Claims 1 – 10 are pending in the current application.

Response to Arguments

2. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1 – 4 and 7 – 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,860,072 to Schofield in view of U.S. Patent No. 6,321,273 to Schofield [hereinafter referred to as Schofield273].**

5. As to claim 1, Schofield teaches the invention substantially including a method comprising:

obtaining a plurality of attribute specifications, each of said attribute specifications including an attribute name and an attribute type [e.g. col. 1 line 61; col. 2 line 1-12]; and

generating a permutation of said plurality of attribute specifications [e.g. col. 2 line 13-23; col. 3 line 14-21].

6. Although Schofield teaches the invention substantially, Schofield does not specifically teach identifying an ordering of the attribute specifications and updating the attribute specifications according to the identified order.

However, Schofield²⁷³ teaches a method for processing a object call between a client computer system and a server computer system [col. 3, lines 49 – 57], identifying an ordering of the attribute specifications [entries 402 within the parameterized vector 400 are arranged in a predetermined canonical order; col. 7, lines 22 – 35] and updating the attribute specifications according to the identified order [mapping is a one-to-one correspondence between the canonical ordering in parameterized vector 400 and the parameter order required....each entry 502 in the parameter area 500 is initialized to contain an object pointed to...by the corresponding entry 402 in the parameterized vector 400. In this fashion, the parameter area becomes a new parameter list, arranged in the correct parameter order for the server system 100'; col. 7, line 55 - col. 8, line 13].

7. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to apply the teaching of identifying an ordering of the attribute specifications and updating the attribute specifications according to the identified order as taught by Schofield²⁷³ to the invention of Schofield because this provides a methodology for passing parameter lists, such as parameter list 200, between systems, such as client 100 and server 100' in such a way that the parameters 202 are correctly arranged for both client 100 and server 100' [col. 7, lines 1 - 5 of Schofield²⁷³].

8. As to claim 2, Schofield teaches a method generating further comprises:

grouping said plurality of attribute specifications into type groups, each of said type groups containing at least one attribute of same said attribute type [e.g. col. 9 line 43-53];

associating each of said type groups with a corresponding type size [e.g. col. 9 line 30-38]; and

sorting said type groups in an descending order based on the value of said corresponding type size [e.g. col. 12 line 38-41].

9. As to claim 3, Schofield teaches a method associating further comprises:

determining said corresponding type size for a type group [e.g. col. 11 line 14-27]; and

assigning said corresponding type size to said type group [e.g. col. 12 line 65].

10. As to claim 4, Schofield teaches a method determining includes:

obtaining said corresponding type size from a set of pre-defined primitive type sizes if the attribute type of said type group is a primitive type [e.g. col. 12 line 65];

extracting a plurality of internal attribute specifications from said type group if the attribute type of said type group is a non-primitive type, each of said internal attribute specifications including an attribute name and an attribute type [e.g. col. 14 line 33-36];
and

generating a permutation of said plurality of internal attribute specifications [e.g. col. 11 line 14-37]; and

computing said corresponding type size of said type group by counting the total number of bytes occupied by said permutation of said plurality of internal attribute specifications [e.g. col. 12 line 42-45].

11. As to claim 7, Schofield as modified teaches a medium having information recorded thereon, such that when said information is read and executed by a computer, the computer is caused to:

obtain a plurality of attribute specifications, each of said attribute specifications including an attribute name and an attribute type [e.g. col. 14 line 33-36; col. 15 line 6-9 of Schofield];

identifying an ordering of the attribute specifications [entries 402 within the parameterized vector 400 are arranged in a predetermined canonical order; col. 7, lines 22 – 35 of Schofield²⁷³]; and

updating the attribute specifications according to the identified order [mapping is a one-to-one correspondence between the canonical ordering in parameterized vector 400 and the parameter order required....each entry 502 in the parameter area 500 is initialized to contain an object pointed to...by the corresponding entry 402 in the parameterized vector 400. In this fashion, the parameter area becomes a new parameter list, arranged in the correct parameter order for the server system 100'; col. 7, line 55 - col. 8, line 13 of Schofield²⁷³]

Art Unit: 2194

generate a permutation of said plurality of attribute specifications [e.g. col. 11 line 14-37 of Schofield].

12. As to claim 8, Schofield teaches that information recorded on said medium further causes said computer to:

group said plurality of attribute specifications into type groups, each of said type groups containing at least one attribute of same said attribute type [e.g. col. 9 line 43-53];

associate each of said type groups with a corresponding type size [e.g. col. 9 line 30-38]; and

sort said type groups in a descending order based on the value of said corresponding type size [e.g. col. 12 line 38-41].

13. As to claim 9, Schofield teaches that information recorded on said medium further causes said computer to:

determine said corresponding type size for a type group [e.g. col. 11 line 14-27];
and

assign said corresponding type size to said type group [e.g. col. 12 line 65].

14. As to claim 10, Schofield teaches that information recorded on said medium further causes said computer to:

obtain said corresponding type size from a set of pre-defined primitive type sizes if the attribute type of said type group is a primitive type [e.g. col. 12 line 65];

extract a plurality of internal attribute specifications from said type group if the attribute type of said type group is a non-primitive type, each of said internal attribute specifications including an attribute name and an attribute type [e.g. col. 14 line 33-36]; and

generate a permutation of said plurality of internal attribute specifications [e.g. col. 11 line 14-37]; and

compute said corresponding type size of said type group by counting the total number of bytes occupied by said permutation of said plurality of internal attribute specifications [e.g. col. 12 line 42-45].

15. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schofield and Schofield²⁷³ further in view of “Customizing IDL Mappings and ORB Protocols” [hereinafter referred to as Welling].

16. As to claim 5, Schofield as modified does not specifically show a set of pre-defined primitive type sizes includes the type size definition of C++.

However, Welling teaches the mapping data type between IDL and C++ programming language [Customizing IDL Mapping and ORB Protocols, page 397-398].

17. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Schofield as modified with Welling because this

Art Unit: 2194

provides an automated process for mapping from IDL to C++ programming language and offer portable and interoperable CORBA compliant application code with different ORB implementations [section 2, p. 397 of Welling].

18. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schofield and Schofield²⁷³ further in view of “Java 2 Distributed Object Middleware Performance Analysis and Optimization” [hereinafter referred to as Juric].

19. As to claim 6, Schofield as modified does not specifically show a set of pre-defined primitive type sizes include the type size definition of Java.

However, Juric teaches the data type mapping between the primitive type in Java programming language and CORBA IDL [Java2 Distributed Object Middleware Performance Analysis and Optimization, page 31-33].

20. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Schofield as modified with Juric because this enables the use of RMI over the IIOP protocol and makes it CORBA compliant [last paragraph of p. 39 – first paragraph of p. 40 of Juric].

Conclusion

21. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

22. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Li B. Zhen whose telephone number is (571) 272-3768. The examiner can normally be reached on Mon - Fri, 8:30am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
